

Business Rules

Project Information and Requirements

- **BR-001 — Project Description**

The user must explain what project they want to create and what they want the project to achieve.

- **BR-002 — Main Features**

The user should describe the main features, functions, or capabilities they expect from the project.

- **BR-003 — Users**

The project should identify who will use the system when this information is relevant.

- **BR-004 — Platform or Project Type Information**

The user should provide enough information for the system to understand whether the project is, for example, a web application, mobile application, machine-learning system, internal business system, or another type of project.

The user does not have to manually select the type. The AI can determine it from the description.

- **BR-005 — Integrations**

If the project needs to communicate with another API, system, platform, database, or third-party service, the user should describe that integration when known.

- **BR-006 — Important Constraints**

The user should provide important restrictions or requirements that may affect the project, such as required technologies, business limitations, security requirements, or other important constraints.

- **BR-007 — Start Date**

The user should provide the planned project start date when scheduling is required.

- **BR-008 — Clarification**

If the provided project information is not sufficient to create a reliable project plan, the system should ask the user for the missing or unclear information.
