

# Testing Standards

## Website Quality and Playwright Validation

### **TR-001 - Button Functionality**

All visible interactive buttons must perform their intended action when clicked.

---

### **TR-002 - Navigation Functionality**

Navigation links and menu items must lead to valid pages and must not result in broken pages or unexpected application errors.

---

### **TR-003 - Page Response Time**

Main application pages should load within 3 seconds under normal testing conditions.

A slower result may be marked as a warning or failure depending on the measured delay.

---

### **TR-004 - User Action Response Time**

Important user actions such as submit, save, search, approve, or delete should provide a visible response within 2 seconds under normal testing conditions.

---

### **TR-005 - Required Form Validation**

Forms must prevent submission when required information is missing.

A clear validation message should be shown to the user.

---

### **TR-006 - Invalid Input Handling**

Invalid or incorrectly formatted input must be handled without causing the application to crash, show a blank page, or return an unexpected system error.

---

### **TR-007 - User Feedback**

Important actions should provide visible feedback to the user, such as a success message, error message, confirmation, or updated page state.

---

# Testing Standards

## Website Quality and Playwright Validation

### **TR-008 - Responsive Interface**

Important content, forms, navigation, and controls should remain visible and usable on supported desktop, tablet, and mobile screen sizes.
