

Employee and Working Rules

Employee Eligibility and Workload

EW-001 - Employee Data Required

Employee recommendations can only be generated when employee records are available.

Employee records should include at least the employee name, role, skills where available, active-project count, and employment status.

EW-002 - Active Employee Requirement

Only employees with an active status may be recommended for a new project.

EW-003 - Required Role

The system must identify the main role required for the project before recommending employees.

EW-004 - Role and Skill Matching

An employee should only be recommended when the employee's recorded role is suitable for the required project role.

When skills are available, employees whose skills better match the project requirements should receive higher recommendation priority.

EW-005 - Concurrent Project Limits

The maximum number of active projects allowed for each role is:

Project Manager: 4 projects

Software Developer, Backend Developer, Frontend Developer: 3 projects

Mobile Developer: 3 projects

UI/UX Designer: 4 projects

QA Engineer, Test Engineer: 4 projects

Data Engineer: 3 projects

Machine Learning Engineer, AI Engineer: 3 projects

DevOps Engineer, Cloud Engineer: 4 projects

Business Analyst: 4 projects

Other roles without a specific rule: 3 projects
